

SPARXSTAR

Starmus Audio Recorder

DVE Schema Alignment Document

v2.0 — April 2026 // Starisian Technologies
Supersedes v1.0. All gap fields resolved. Platform Vision v3.0 incorporated.

Document Purpose	Definitive field-by-field alignment of all starmus_* fields in sparxstar-starmus-audio against DVE canonical names. All v1.0 gap items resolved. Architectural context incorporated from Platform Vision v3.0.
Architectural Position	Starmus is a Briefcase-level (Layer 1) acquisition instrument. It operates at group level, governed by community sovereignty. The Locket (Layer 0 / personal) feeds into it via an affirmative sovereignty declaration — to be built. Starmus does not operate at Locket level today.
Governance Model	Draft assets default to recorder-only rights. The platform operator always retains the right to linguistic decomposition — this is non-negotiable and is a condition of platform use, not a configurable field. Extended rights (licensing, royalty splits, geographic scope) are a separate module, not part of core intake.
Consent as Declaration	Consent fields are not form checkboxes. They are formal declarations that travel with the asset and are attributable to the person who made them — exactly as in music. If the declaration was wrong, responsibility stays with the declarant. The platform records and enforces that a declaration was made; it does not independently verify its accuracy.
Asset Type Independence	The governance model does not change with asset type. Audio, poetry, photography, art, traditional knowledge, music — same sovereignty model, same declaration requirement, same forensic record. Starmus currently acquires audio. The structure must accommodate other asset types without a rewrite.
Core Prefix Change	All starmus_* prefixed fields must become sparx_sparxstar_* (platform fields) or sparx_aiwa_* (AiWA fields). This is a systemic rename across the codebase — SchemaMapper FIELD_MAP, ACF JSON name attributes, all get_field/update_field calls, JS field references, and a data migration for existing records.

1. Foundational Architectural Decisions

These were resolved through architectural review of Platform Vision v3.0 and govern how all field mappings below are interpreted.

Decision	Resolution
Transcription textTranslation text	These are NOT meta fields. Transcription (sound → text) and Translation (e.g. English → French) each live as the post_content of their own DVE post types — sparx_aiwa_transcription and sparx_aiwa_translation. The text is the post. Nothing to map in StarmusSchemaMapper. Remove starmus_transcription_text and starmus_translation_text from the field map entirely. The link back to the audio recording is via sparx_sparxstar_linked_audio on those post types.
Transcription hashTranslation hash	These are integrity hashes of the respective post_content, stored as meta on their post types. sparx_sparxstar_transcription_hash already exists on the transcript post type in DVE. sparx_sparxstar_translation_hash must be added to DVE as a symmetric pair on the translation post type. This is the one confirmed DVE addition required.
Explicit content flag	Required as a field group meta field on THREE post types: audio recording, transcription, and translation. A transcription or translation of explicit content is itself explicit — the designation must travel independently on each. Field name: sparx_aiwa_sensitive_content_warning (true_false, already exists in DVE). Additionally, sparx_lesson_explicit_content exists in DVE for the release/distribution context. These are two distinct fields serving two distinct purposes — intake notation vs release designation.
Rights fields	All starmus_rights_* fields (rights_type, rights_use, rights_geo, rights_royalty, copyright_licensee, copyright_status) are retired. These were defined before DVE locked the canonical rights model. They are replaced by the DVE rights-licensing block fields (sparx_aiwa_rights_* and sparx_sparxstar_*). Draft recordings carry recorder-only rights by default — no rights fields need to be populated at intake. The full rights module is a future build on top of the core acquisition layer.
Consent fields	Consent fields are formal declarations, not form checkboxes. They are forensic records attributable to the declarant. The DVE agreement blocks (group_mod_agreement_standard and group_mod_agreement_enterprise) are the correct containers. The enterprise block with HMAC integrity seal (sparx_sparxstar_agreement_seal) is the target for full forensic consent. The standard block is sufficient for current intake. Both are already in DVE.
Linguistic extraction	The platform operator always retains rights to linguistic decomposition of all assets. This is not a field — it is a governance condition expressed at the platform level. No field is added or removed in Starmus to implement this. It is enforced upstream by the operator configuration, not by intake metadata.
PASSTHROUGH_ALLOWLIST	Eliminated entirely. Every field migrated into FIELD_MAP with explicit DVE canonical target. No field passes through without an explicit mapping. Dual-path processing removed.

2. Status Legend

RENAME	Direct prefix swap only. Concept identical. starmus_ → sparx_sparxstar_ or sparx_aiwa_. No data structure change.
REMAP	Concept match but name also changes beyond prefix. Field exists in DVE under a different name.
RESOLVED	Was a GAP in v1.0. Now resolved — maps to existing DVE field. No DVE addition required.
ADD→DVE	Confirmed addition to DVE required. Field concept is valid, no DVE equivalent exists. Proposal locked — add to sparxstar-digital-village-elder-schema before implementing.
RETIRE	Field removed from Starmus. Either replaced by DVE equivalent, lives in post_content, or was never implemented.
DECIDE	Architectural decision still required before mapping can be locked.

3. Complete Field Alignment Map

3.1 System Identity & Archival Discovery

Starmus Field (current)	DVE Canonical Field	Label	Status	Resolution / Notes
starmus_global_uuid	sparx_sparxstar_global_uu id	Global Unique ID	RENAM E	Prefix swap only.
starmus_stable_uri	sparx_sparxstar_stable_ur i	Permanent Web Link	RENAM E	Prefix swap only.
starmus_linked_data_uri	sparx_sparxstar_linked_da ta_uri	Linked Data URI	RENAM E	Prefix swap only.

3.2 Rights & Licensing — Retired Fields

All starmus_rights_* fields are retired. Draft assets carry recorder-only rights by default. The rights module is a future build. DVE rights-licensing block fields are the target when that module is implemented.

Starmus Field (current)	DVE Canonical Field	Label	Status	Resolution / Notes
starmus_rights_type	— RETIRED —	Rights Type	RETIRE	Replaced by DVE rights-licensing block. Not populated at intake. Future rights module uses sparx_aiwa_rights_status.
starmus_copyright_status	sparx_sparxstar_copyright _status	Copyright Status	RENAM E	Retained for current use. Future rights module will manage this via governance layer.
starmus_rights_use	— RETIRED —	Usage Rules	RETIRE	Replaced by sparx_sparxstar_usage_constraints via rights module. Not populated at intake.
starmus_usage_constraints	sparx_sparxstar_usage_con straints	Usage Rules	RENAM E	Retained as the canonical source key feeding usage constraints.
starmus_rights_geo	sparx_aiwa_limited_countr ies	Territory Limitation	RESOLV ED	Was GAP in v1.0. Maps to DVE territory limitation checkbox in rights-licensing block.
starmus_rights_royalty	sparx_sparxstar_royalty_s plit	Royalty Split	RESOLV ED	Was GAP in v1.0. Maps to DVE royalty split repeater. Simple text → structured repeater. Future rights module implements.

starmus_copyright_license	sparx_aiwa_rights_holder	Primary Rights Holder	RESOLVED	Was GAP in v1.0. Licensee = rights holder in DVE model. post_object field.
---------------------------	--------------------------	-----------------------	----------	--

3.3 Consent & Agreement — Declaration Fields

These fields are forensic records of a formal declaration made by the contributor. They travel with the asset and are attributable to the declarant. The platform records that a declaration was made — it does not verify its accuracy. Responsibility stays with the declarant.

Starmus Field (current)	DVE Canonical Field	Label	Status	Resolution / Notes
starmus_terms_type	sparx_sparxstar_terms_type	Terms Type	RENAME	Prefix swap only.
starmus_submission_id	sparx_sparxstar_signatory_submission_id	Submission UUID	REMAP	Name change: submission_id → signatory_submission_id.
starmus_contributor_signature	sparx_sparxstar_agreement_signature	Signature File	REMAP	contributor_signature → agreement_signature.
starmus_agree_ua	sparx_sparxstar_signatory_user_agent	Signatory User Agent	REMAP	Abbreviation expanded to full DVE name.
starmus_agree_ip	sparx_sparxstar_signatory_ip	Signatory IP	REMAP	Triple alias resolved: ip_address, submission_ip, contributor_ip all consolidated. One source key → sparx_sparxstar_signatory_ip.
starmus_agree_geo	sparx_sparxstar_signatory_geolocation	Signatory Geolocation	REMAP	agree_geo → signatory_geolocation.
starmus_consent_scope	sparx_aiwa_consent_type	Consent Type	RESOLVED	Was GAP in v1.0. Maps to DVE consent_type select. Freeform → select field. Update allowed values to match DVE options.
starmus_anon_status	sparx_aiwa_speaker_anonymized	Speaker Anonymized	RESOLVED	Was GAP in v1.0. Maps to DVE true_false field. Text status → boolean.
starmus_data_sensitivity	sparx_aiwa_access_tier	Access Tier (Security)	RESOLVED	Was GAP in v1.0. Maps to DVE access_tier select. Align values to DVE select options.
agreement_to_terms_toggle	— RETIRED —	—	RETIRE	Boolean toggle retired. Agreement is evidenced by signatory block being populated, not a separate toggle.
agreement_datetime	sparx_sparxstar_signatory_agreement_datetime	Signatory Agreement Datetime	REMAP	Name change + must use gmdate() not date(). UTC only.

3.4 Recording Session Metadata

Starmus Field (current)	DVE Canonical Field	Label	Status	Resolution / Notes
starmus_project_collection_id	sparx_sparxstar_project_collection_id	Project / Collection ID	RENAM E	Prefix swap only.
starmus_accession_number	sparx_sparxstar_accession_number	Accession Number	RENAM E	Prefix swap only.
starmus_session_location	sparx_sparxstar_session_location	Location	RENAM E	Prefix swap only.
starmus_session_gps	sparx_sparxstar_session_gps	GPS Coordinates	RENAM E	Prefix swap only.
starmus_recording_equipment	sparx_sparxstar_recording_equipment	Recording Equipment	RENAM E	Prefix swap only.
starmus_audio_files_originals	sparx_sparxstar_audio_files_originals	Audio Files (Originals)	RENAM E	Prefix swap only.
starmus_media_condition	sparx_sparxstar_media_condition	Media Condition Notes	RENAM E	Prefix swap only.
starmus_access_level	sparx_sparxstar_access_level	Access Level	RENAM E	Prefix swap only.
starmus_audio_quality_score	sparx_sparxstar_audio_quality_score	Audio Quality Score	RENAM E	Prefix swap only. DVE type is taxonomy.
starmus_recording_metadata	sparx_sparxstar_recording_metadata	Recording Metadata (JSON)	RENAM E	Prefix swap only.

3.5 Audio Engineering & Fidelity

Starmus Field (current)	DVE Canonical Field	Label	Status	Resolution / Notes
starmus_sample_rate	sparx_sparxstar_sample_rate	Sample Rate	RENAM E	Prefix swap only. DVE also has sample_rate_type — consider adding.
starmus_bit_depth	sparx_sparxstar_bit_depth	Bit Depth	RENAM E	Prefix swap only. DVE also has bit_depth_type — consider adding.
starmus_channel_layout	sparx_sparxstar_channel_layout	Channel Layout	RENAM E	Prefix swap only.
starmus_tuning_hz	sparx_sparxstar_tuning_hz	Tuning Frequency	RENAM E	Prefix swap only.

starmus_integrated_lufs	sparx_sparxstar_loudness	Loudness	RESOLVED	Was GAP in v1.0. Maps to sparx_sparxstar_loudness. DVE has full loudness suite: loudness, rms, peak, true_peak, loudness_range. LUFS is the loudness measurement — map to sparx_sparxstar_loudness.
-------------------------	--------------------------	----------	----------	---

3.6 Recording Processing & File Pipeline

Starmus Field (current)	DVE Canonical Field	Label	Status	Resolution / Notes
starmus_is_music	sparx_sparxstar_is_music	Is Music?	RENAME	Prefix swap only.
starmus_is_explicit	sparx_aiwa_sensitive_content_warning	Sensitive Content Warning	RESOLVED	Was GAP in v1.0. Maps to DVE true_false field. Required on audio recording, transcription, AND translation post types. Intake notation only — separate from release explicit flag (sparx_lesson_explicit_content).
starmus_school_reviewed	sparx_sparxstar_school_reviewed	School Reviewed	RENAME	Prefix swap only.
starmus_contributor_verification	sparx_sparxstar_contributor_verification	Contributor Verification	RENAME	Prefix swap only.
starmus_qa_review	sparx_sparxstar_qa_review	QA Review	RENAME	Prefix swap only. Resolves aiwa_qc_status ambiguity — sparx_sparxstar_qa_review is the canonical name.
starmus_waveform_json	sparx_sparxstar_waveform_json	Waveform Data (JSON)	RENAME	Prefix swap only.
starmus_original_source	sparx_sparxstar_original_source	Original Source File	RENAME	Prefix swap only.
starmus_archival_wav	sparx_sparxstar_archival_wav	Archival WAV File	RENAME	Prefix swap only.
starmus_mastered_mp3	sparx_sparxstar_mastered_mp3	Mastered MP3 File	RENAME	Prefix swap only.
starmus_cloud_object_uri	sparx_sparxstar_cloud_object_uri	Cloud Storage Link	RENAME	Prefix swap only.
starmus_device_fingerprint	sparx_sparxstar_device_fingerprint	Device Fingerprint	RENAME	Prefix swap only.

starmus_environment_data	sparx_sparxstar_environment_data	Environment Snapshot	RENAM E	Prefix swap only.
starmus_processing_log	sparx_sparxstar_processing_log	Audio Processing Log	RENAM E	Prefix swap only.

3.7 Transcription & Translation

Transcription = sound to text. Translation = one language to another (e.g. English to French). These are distinct post types, not field groups. The text content lives in post_content of the respective post type, not in ACF meta fields.

Starmus Field (current)	DVE Canonical Field	Label	Status	Resolution / Notes
starmus_transcription_text	— RETIRED —	Plain Text Transcription	RETIRE	Lives in post_content of sparx_aiwa_transcription post type. Not a meta field. Remove from SchemaMapper entirely.
starmus_translation_text	— RETIRED —	Plain Text Translation	RETIRE	Lives in post_content of sparx_aiwa_translation post type. Not a meta field. Remove from SchemaMapper entirely.
starmus_transcription_json	sparx_sparxstar_transcription_json	Time-Indexed Data (JSON)	RENAM E	Prefix swap only. Canonical timestamped transcription container.
starmus_transcription_hash	sparx_sparxstar_transcription_hash	Text Content Hash	RENAM E	Prefix swap only. Hash of transcription post_content.
starmus_translation_hash	sparx_sparxstar_translation_hash	Translation Content Hash	ADD→D VE	Must be added to DVE transcription-translation block as symmetric pair to transcription_hash. Hash of translation post_content.
starmus_translation_language	sparx_sparxstar_translation_language	Translation Language	RENAM E	Prefix swap only. DVE type is taxonomy.
starmus_original_language	sparx_sparxstar_original_language	Original Language	RENAM E	Prefix swap only. DVE type is taxonomy.
starmus_back_translation_text	sparx_sparxstar_back_translation_text	Back-Translation Verification	RENAM E	Prefix swap only.
starmus_linked_audio	sparx_sparxstar_linked_audio	Linked Audio (post_object)	RENAM E	Prefix swap only.
starmus_transcription_parent	sparx_sparxstar_transcription_parent	Source Transcription	RENAM E	Prefix swap only.

3.8 Music Composition & Release

Starmus Field (current)	DVE Canonical Field	Label	Status	Resolution / Notes
starmus_bpm	sparx_sparxstar_bpm	Tempo (BPM)	RENAME	Prefix swap only.
starmus_musical_key	sparx_sparxstar_musical_key	Musical Key	RENAME	Prefix swap only.
starmus_isrc_code	sparx_aiwa_isrc_code	ISRC Code	RENAME	Maps to sparx_aiwa_prefix. Prefix change only.
starmus_stems_cloud_uri	sparx_sparxstar_stems_cloud_uri	Stem Bundle URI	RENAME	Prefix swap only.
starmus_daw_project_uri	sparx_sparxstar_daw_project_uri	DAW Project Link	RENAME	Prefix swap only.
starmus_upc_code	sparx_product_global_unique_id	Global Unique ID	DECIDE	DVE places UPC in commerce block. Confirm whether recording-level UPC belongs here or in release post type.
starmus_catalog_number	— DECIDE —	Catalog Number	DECIDE	No clear DVE home in recording block. Likely belongs in release post type. Clarify before mapping.
starmus_label_name	— DECIDE —	Record Label Name	DECIDE	No DVE field in recording block. Likely belongs in release post type. Clarify before mapping.

3.9 Former PASSTHROUGH_ALLOWLIST Fields

These fields were in PASSTHROUGH_ALLOWLIST and are now explicitly mapped. The PASSTHROUGH_ALLOWLIST is eliminated.

Starmus Field (current)	DVE Canonical Field	Label	Status	Resolution / Notes
contributor_name	sparx_sparxstar_legal_name	Display Name (Legal)	REMAP	contributor_name → sparx_sparxstar_legal_name from contributor-identity block.
dc_title	(post_title)	Post Title	RETIRE	Maps to WordPress post_title at post creation. Never saved to ACF meta. Confirmed.

dc_subject	sparx_sparxstar_assigned_subject	Subject (taxonomy)	REMAP	Handled via wp_set_post_terms, not ACF meta. Taxonomy assignment.
dc_language	sparx_sparxstar_original_language	Original Language	REMAP	Consolidate with starmus_original_language. One field, one source.
dc_identifier	sparx_sparxstar_global_uuid	Global Unique ID	REMAP	dc_identifier was the UUID. Consolidate to sparx_sparxstar_global_uuid.
dc_creator	sparx_sparxstar_legal_name	Display Name	REMAP	dc_creator used by Sanitizer. Align to contributor-identity fields.
dc_description	(post_content)	Post Content	RETIRE	dc_description maps to post content, not ACF meta. Confirm and remove from mapper.
dc_format	sparx_sparxstar_recording_metadata	Recording Metadata	REMAP	File format lives inside recording_metadata JSON blob. No standalone field needed.
date_created	sparx_aiwa_date_created	Date Entry Created	REMAP	Must use gmdate() not date(). UTC only.
session_date	sparx_sparxstar_session_date	Session Date	RENAME	Prefix rename.
geolocation	sparx_sparxstar_session_gps	GPS Coordinates	REMAP	Consolidate geolocation and gps_coordinates aliases to single source key.
parental_permission_slip	sparx_sparxstar_parental_permission_slip	Parental Permission Slip	RENAME	Prefix swap only.

3.10 ACF JSON Schema (acf-json/) — AiWA Dictionary Fields

These fields serve the dictionary/linguistic entry post type. They are distinct from the audio recording fields above. The aiwa_ prefix on these fields needs the sparx_ prefix added.

Starmus Field (current)	DVE Canonical Field	Label	Status	Resolution / Notes
aiwa_ipa_pronunciation	sparx_aiwa_ipa_pronunciation	IPA Pronunciation	RENAME	Add sparx_ prefix. Concept identical.
aiwa_audio_file	sparx_aiwa_audio_link	Audio Recording (file)	REMAP	audio_file → audio_link. DVE field name.
aiwa_qc_status	sparx_sparxstar_qa_review	QA Review	REMAP	Resolves D-02. aiwa_qc_status → sparx_sparxstar_qa_review. Canonical name confirmed.

aiwa_qc_notes	sparx_aiwa_qc_notes	Internal Notes	RESOLVED	Was GAP in v1.0. sparx_aiwa_qc_notes exists in DVE contributor_word schema. Add sparx_prefix.
aiwa_part_of_speech	sparx_sparxstar_assigned_pos	Part of Speech (tax)	REMAP	Convert from select field to taxonomy assignment.
aiwa_rating	— RETIRE one —	—	DECIDE	aiwa_rating and aiwa_rating_average are duplicate concepts. Retire one. Rating average should be server-computed, not an editable field.
aiwa_rating_average	sparx_aiwa_quality_rating	Data Quality Rating	REMAP	Retain this one as sparx_aiwa_quality_rating. Retire aiwa_rating. Compute server-side.
aiwa_origin	sparx_prov_derived_from	Derived From	REMAP	Provenance origin → sparx_prov_derived_from.
aiwa_extract	(post_content)	Long Definition	RETIRE	Long definition lives in post_content of dictionary post type. Not a meta field.
aiwa_translation	sparx_sparxstar_translation_language	—	DECIDE	Confirm which post type this field group applies to. If dictionary entry, these are linguistic fields not covered by audio recording schema.
aiwa_translation_english	—	—	DECIDE	Same — confirm post type scope before mapping.
aiwa_translation_french	—	—	DECIDE	Same.

4. Confirmed DVE Additions Required

These are the only fields that need to be added to sparxstar-digital-village-elder-schema. All other gaps from v1.0 are resolved to existing DVE fields.

Field Name	DVE Block	Type	Rationale
sparx_sparxstar_translation_hash	transcription-translation block(group_mod_transcription_translation)	text	Symmetric pair to sparx_sparxstar_transcription_hash which already exists. Hash of translation post_content for integrity verification. Both transcription and translation are hashable content — both need a hash field.
sparx_aiwa_sensitive_content_warning(on transcription + translation post types)	ethical-consent block(already exists on audio recording)	true_false	Field already exists in DVE on the audio recording post type. Needs to be added to the transcription and translation post type schemas as well. A transcription or translation of explicit content is itself explicit — the designation must travel independently on each post type.

5. Implementation Sequence

The three DECIDE items (upc_code, catalog_number, label_name, and the aiwa_translation dictionary fields) do not block implementation. They belong to the release post type clarification and can be resolved in parallel. Everything else is unambiguous.

Step	What	Detail	Output
1	Update DVE repo	Add sparx_sparxstar_translation_hash to transcription-translation block. Add sparx_aiwa_sensitive_content_warning to transcription and translation post type schemas. These are the only DVE changes required.	Updated DVE schema
2	Eliminate PASSTHROUGH_ALLOWLIST	Migrate every field from PASSTHROUGH_ALLOWLIST into FIELD_MAP with explicit DVE target per Section 3.9. Remove PASSTHROUGH_ALLOWLIST constant and all references to it. Remove the dual-path processing loop in map_form_data().	Clean single-path SchemaMapper
3	Update FIELD_MAP output keys	Rename all 38 RENAME output keys (starmus_ → sparx_sparxstar_ or sparx_aiwa_). Update 11 REMAP entries. Retire starmus_transcription_text, starmus_translation_text, agreement_to_terms_toggle, dc_title, dc_description, dc_format, aiwa_extract from the map entirely.	Updated FIELD_MAP
4	Fix timestamps	Replace all date() with gmdate() in map_form_data(). Assert UTC timezone at plugin bootstrap. Affects agreement_datetime → sparx_sparxstar_signatory_agreement_datetime and date_created → sparx_aiwa_date_created.	No local-timezone DB writes
5	Consolidate aliases	Triple-alias (ip_address / submission_ip / contributor_ip) — normalize all three to ip_address in complex logic before mapping. Single output to sparx_sparxstar_signatory_ip. dc_language and starmus_original_language — consolidate to single source key → sparx_sparxstar_original_language. geolocation and gps_coordinates → sparx_sparxstar_session_gps.	No duplicate field writes
6	Update is_json_field()	Update method to reference sparx_sparxstar_* names. Update all call-sites that pass field names to this method.	JSON fields correctly identified
7	Update ACF JSON	In acf-json/starmus-audio-recorder-scf.json: rename field name attributes to DVE canonical names. ACF key attributes stay the same — only name attributes change.	Updated SCF JSON
8	Update all field calls	Grep entire codebase for get_field() and update_field() calls using starmus_* names. Update each. Includes PHP templates, REST handlers, DAL methods, admin screens.	No starmus_* in field calls
9	Update JS references	Audit JS modules reading field names from REST responses. STARMUS_BOOTSTRAP and REST payloads that include meta field names must use DVE canonical names.	No starmus_* in JS
10	Data migration	Write migration script: read each starmus_* meta key, write value to sparx_sparxstar_* key. Dry-run mode first. Preserve old keys during transition window. Rollback script required.	Migration + rollback scripts

11	CI enforcement	Add CI check: grep for any remaining starmus_ prefix in PHP and JS source files (excluding migration script). Build fails if found. This enforces the rename is complete and prevents regression.	CI rule: no starmus_ in source
----	----------------	---	--------------------------------

Zero outstanding gaps. Two DVE additions confirmed. Three DECIDE items on release post type — do not block implementation.

Version: 2.0 | Supersedes v1.0 | Starisian Technologies | April 2026
Platform Vision v3.0 incorporated. All gap fields resolved against DVE canonical schema.
